

Blackhawk™ RES SE Remote Emulation Server for Blackhawk Emulators

Compatible Operating Systems: Windows® 2000, XP

Description

The Blackhawk Remote Emulation Server SE allows Blackhawk USB560 and PCI JTAG emulators installed in a PC with Ethernet interface to be accessed over a local area network (LAN) from another PC running Code Composer Studio™. Users can share the latest high performance emulation technology from TI, reducing the need and cost for multiple units. This package contains all of the software necessary to setup a remote server for multiple machines. An ideal way to save and update to the latest tools from TI and Blackhawk.

Remote Emulation Server SE supports all Blackhawk USB560, PCI and LAN based emulators only.

Blackhawk JTAG Emulators and Remote Emulation Server SE are available from a world wide network of industry

Server Requirements

- PC running Windows® 2000 or XP
- Does not require Code Composer Studio Installed
- Installed Blackhawk Emulator and Device Drivers
- Ethernet or Wireless Networking under TCP/IP
- CD-ROM drive for Server side software installation

Client Requirements

- PC running Windows® 2000 or XP
- Code Composer Studio v2.2 and later
- Ethernet or Wireless Networking under TCP/IP
- CD-ROM drive for Client side software Installation

Part Number US13-2000

Ultimate Solutions, Inc.

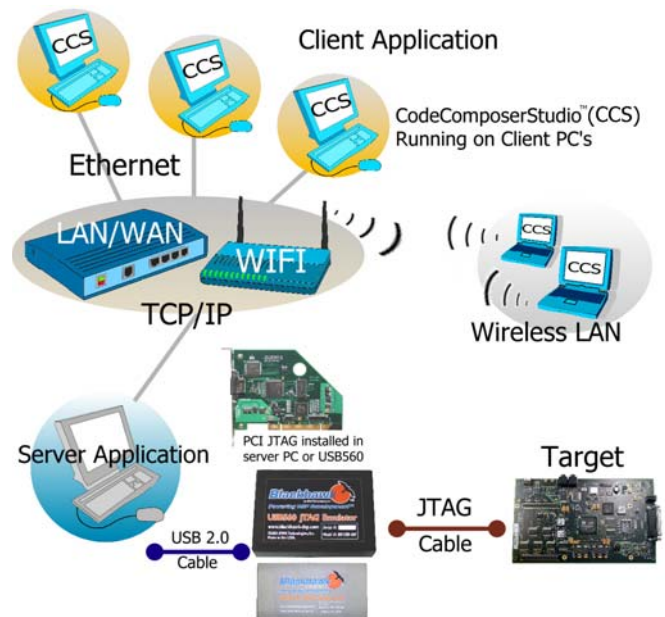

10 Clever Lane • Tewksbury, MA 01876-1580 • 866.453.3383 • www.ultsol.com

Features

- Client-Server Implementation
- High Performance
- Supports 10/100-Mbit Ethernet
- Uses TCP/IP protocols
- Quick Setup
- Compatible with Wireless Networks (802.11b, 802.11g)

Benefits

- Flexible and Cost Effective
- Enables Remote Debugging
- Permits sharing emulation resources
- Extends XDS560-class Emulation
- Software-only solution to remote debugging

Blackhawk PCI or USB560 Emulator Installed on Server

ABOUT BLACKHAWK

Blackhawk™ is the first to introduce a USB JTAG Emulator for Texas Instruments DSP's and is a member of the Texas Instruments Third Party Developers Network. Blackhawk™ is a business unit of EWA/EWA Technologies, Inc. with headquarters in Herndon, Virginia. Founded in 1977, EWA employs more than 1,000 people in eight operating units and associated activities around the world providing a wide range of IT applications to a broad constellation of government and commercial customers, including the US Department of Defense and all military services, national intelligence and law enforcement agencies, NASA, and international defense, security and banking organizations.
